Your project

The structure of CMEs in the corona: comparing a flux rope density model with observations

Supervisor: Huw Morgan

[\[abstract\]](#)

Your feedback

All marks are provisional and subject to confirmation by the exam board.

Where material is double-marked, the feedback given by the two assessors may focus on different aspects or may put different emphasis on them. For this reason, all double-marked results are moderated for consistency, and we will only show the moderated mark once confirmed by the exam board.

Even then, the marks shown should be treated as provisional until confirmed by the University and logged to your student record.

Progress mark - not marked yet

Projected result: 0% (with 0% of marks in)

0/0 marks achieved so far.

Please also ask your supervisor to give you more specific feedback in person.

Submit coursework

[here!](#)

If you are unsure how to present your work, have a look at some of the examples in the library box below and compare them with the guidance given on the [project website](#). Your own writing style and page layout may be different, but these documents may give you some ideas how to present your work. The guidance for reports in the different project modules is very similar, the

difference is only in the depth and extent of coverage expected. Naturally, you won't find a report on exactly your topic here...

Showcase: the report library

Below are links to a few reports, literature reviews and minor project documents that have been found to be particularly good in recent years. The authors have kindly agreed to make them available for reference.
